Some thoughts

Every year, our ASSIFONTE report takes stock of the crisis situation in Europe (increases in milk prices, increases in the cost of raw materials, financial and economic crises). It is as if everything is going badly.

However, despite all this, the export situation has changed significantly, as a result of the relocation of key plants as well as a 30 % increase in production in the past ten years.

Such rapid progress in terms of volume is rare on the milk market. Therefore, it is worth asking how such success has been possible in the face of regulatory and customs constraints as well as in the current economic climate.

For ten years, Europe has been basking in the impact of globalisation. Emerging markets have honed their production and export strategies and population growth in these countries, coupled with rapid economic development, have boosted the demand for foodstuffs, and milk products in particular.

But it's not just a straightforward increase in demand; the demand is for high-quality products and nutritious foodstuffs the consumer can trust 100 %. That is precisely the issue here, and the reason why European products continue to be favoured in these countries.

It is also the issue that plays the leading role in European consumers' attitudes: good-quality, nutritious products that taste good, suitable for a range of uses and available for reasonable prices. It is easy to see that processed cheeses live up to these demands.

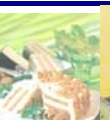

Globalisation has revealed that the requirements of emerging markets are the same across the board, despite them showing different levels of spending power. No matter what their budget, everyone has the right to be respected in terms of their health. These developments in production have also been accompanied by the simultaneous strengthening of quality.

The image of processed cheese is of a serious product that reinforces consumer confidence, is versatile, tastes good, is easy to preserve and which has a place at any meal.

The market for processed cheese is one that is defined by permanent innovation.

However, innovation is not the same as fashion:

Above all, marketing has to respond to the expectations of consumers, which does not exclude the possibility of using a little imagination. However, processed cheese does not whiten your teeth, get rid of wrinkles, cure short-sightedness or boost your tan.

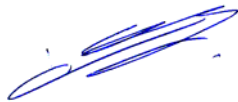

Processed cheese is real cheese with all of cheese's usual qualities, such as calcium, protein, vitamins and minerals. You can take it anywhere and it is easy to keep it fresh, even at room temperature. It aids your daily nutrition and improves countless recipes and industrial catering recipes. As part of your daily diet, who could want more from a cheese?

This is why generations of consumers continue to give processed cheese to their children and children's children, and why processed cheese has known such success in industrial recipes.

Let's continue to spread the word with pride.

It is confidence that consumers require, not promises or dubious statements of a product's therapeutic benefits – it's real and healthy products they are after.

After all, consumers are more intelligent than most advertising gives them credit for – and that's great news for us!

Alain Cougoulic
President

1 INTERNATIONAL ECONOMIC DEVELOPMENT

▪ Market developments

Economic growth, measured via the development of the gross domestic product, is set to increase by approx. 3 % in 2011; although the equivalent figure for last year (2010) was slightly higher at 3.5%, the basis for comparison from 2009 was very low. As a result, Germany is one of the fastest-growing developed countries in the world. However, after the economic crisis in

2008/09 we are now experiencing a debt crisis in 2010/11. Southern European countries and the USA are so overindebted that they are now under the threat of insolvency. This will influence foreign exchange rates and cause exchange rates to fluctuate enormously, which in turn will also have an impact on exports.

- **Convergence between European member states**

Europe is not a uniform economic region. Inflation rates, balances and national levels of debt have evolved differently in different countries. The worst "offenders" in the eurozone are Greece, Ireland, Portugal and Spain. However, this must not be allowed to cover up for the fact that even bigger EU

countries like France and Germany still have a lot of homework to do before their national debt is properly under control. The example of the USA, which is at risk of insolvency, is a warning example even for the large industrial nations in the eurozone.

Convergence state of potential EEC countries

P=preliminary; source: DB Research office and Destatis | n.v. = not available

- **The dollar exchange rate**

The much-discussed exchange rate relationship between the US dollar and the euro only paints an incomplete picture of the strength of the European single currency. Other special factors like the level of indebtedness in the USA are distorting this relationship. Unfortunately, comparisons with the development of other currencies, such as Swiss Francs, paint a much gloomier picture of the value of the euro. If the nations in the European Union continue to increase levels of debt in the eurozone then the current value of the euro is still set too high.

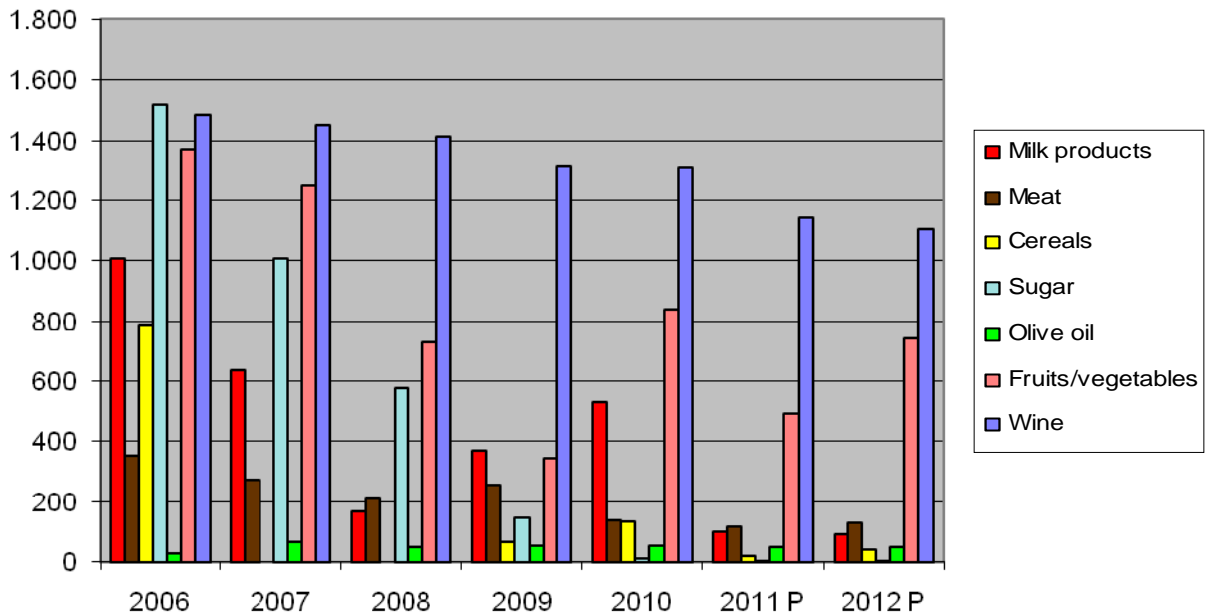

2 THE COMMON MARKET

- **The organisation of the European market**

The total expenditure of the European Union continues to increase. This is due to the eastwards expansion as well as to the joining of Croatia and Iceland in the near future. The new accession countries from eastern Europe are demanding full harmonisation of agricultural payments to their producers as well. In the past, the producers only received the smaller income compensation in the form of land subsidies. If this demand is accommodated, the budget will need to grow further or be restructured. In both cases, Germany - as the biggest net payer - would stand to lose out. The consultations on the "Post-2013 budget" will therefore be very tense and will form the basis for the new agricultural policies. Parliament for example demands that upper limits are applied to agricultural subsidies, which would impact the large-scale farms in Eastern Germany particularly badly. Germany takes the view that "a hectare is a hectare" and emphasises the positive effects on the labour market of income subsidies which are related to land area without an upper limit on subsidies. The linking of payments to new environmental targets ("greening") is also viewed critically in some areas. Implementation of this system would create additional bureaucratic red tape and complicate the overall system.

EU Draft Budget 2012:	Market-related provisions	€3,147.9 million €
	Direct subsidies	€40,673.7 million €
	Rural development	€12,748.3 million €
	Total agriculture expenditure	€56,759.1 million €
	Total EU expenditure	€132,738.7 million €

▪ **Dairy market expenditure**

The gross expenditure for the dairy market now only plays a secondary role within the framework of the entire EU budget. According to the EU budget, €92 million is budgeted for 2012, of which the largest part is set aside for subsidies for school milk. These figures do not include subsidies via the now decoupled EU milk premium (approx. 3.5 cent/kg).

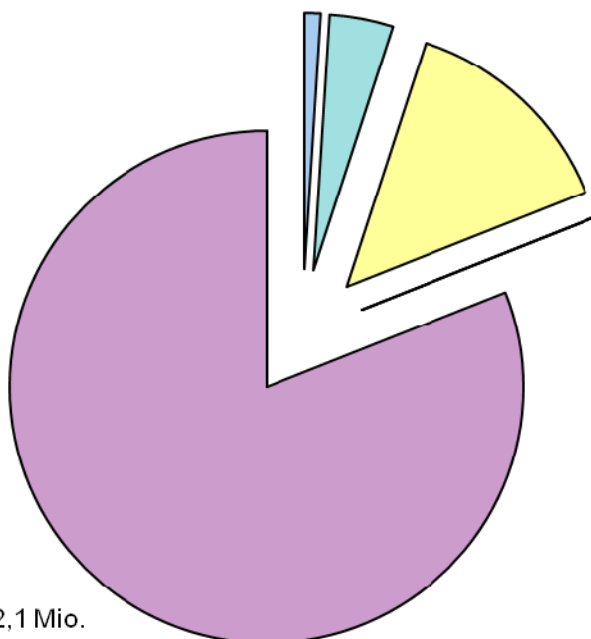

EU payments to the Most Deprived Persons programme are also not included. Here, a total of approx. €500

million is now spent every year, part of which is refinanced by releasing butter and skimmed milk powder from stocks. Germany is not taking part in this programme, but is making intervention stocks available.

The milk budget is receiving positive relief through sales from intervention stocks. In some cases, the butter and skimmed milk powder could be sold at significantly higher prices than when it was put into storage in the crisis year 2008.

**Dairy market expenditure according to their disposal 2012
(from draft general EU budget 2012)**

- Refunds (1 Mio. €)
- Intervention SMP (-4 Mio. €)
- Intervention storage of butter and cream (14 Mio. €)
- Aid for disposal of SM/SMP (-)
- other measures relating to butterfat (-)
- Intervention storage of cheese (-)
- Other measures/schoolmilk (81 Mio. €)

Total expenditure milk: 92,1 Mio.

▪ International situation

During the reporting year the European Union has not concluded any significant trade agreements with third party countries. However, consultations are continuing in many subject areas. The efforts to allow Iceland and Croatia to join the EU are still on-going. It appears that their accession will be able to take place on time. Both countries have been able to fulfil the necessary entry requirements, and the individual negotiation packages can be completed. WTO negotiations are continuing under Director-General Lamy. Progress is not being made. There is a lack of impetus and desire to arrive at a final conclusion. A new chairman has been appointed to the agriculture committee which is in charge. The demands of the oceanic

countries in particular are very high, but threshold countries are refusing to make any further concessions.

The international arrangements relating to veterinary agreements are important. The European Union is driving particularly intensive negotiations in Russia. Russia is a major trade partner in the cheese sector, and the deliveries are very important to European dairy farming.

Further free trade agreements could be concluded, and new ones are in the pipeline. It would appear that the global economy is focussing more on bilateral free trade agreements and that it is less likely that a multinational trade agreement will come together under the banner of the WTO.

▪ Agriculture policy 2013

In Brussels, the Council of Ministers, the Commission and the European Parliament are negotiating about the changes which are due to be made to the agriculture policy. This is necessary because a new financial framework needs to be drawn up from 2013 onwards. Initial opinions have been expressed, and the following picture is emerging: very large budgetary funds are still to be used in agricultural policy. However, the payments for premiums for the first column are to be subjected

to "greening". As a result, additional environmental specifications will therefore become mandatory for farmers. In the second column, even more funds will be made available for rural development. Furthermore, there is to be a redistribution of funds between old and new member states, particularly in Eastern Europe. Subsidies to large-scale farms are to be restricted (capping). The milk quota will expire in 2015.

▪ High Level Group on milk

The consultations of the High Level Group on Milk continued during the reporting year. The Commission has submitted corresponding proposals for redefining the contractual relationships between milk producers and dairies.

The EU parliament deliberated on this and actually even tightened up the rulings. However, the Council of Ministers still needs to sign off the final results in the TRIALOG negotiations.

The European dairy industry is in favour of freedom of contract. Further administrative measures are not

required and would not improve the value creation chain.

▪ Production of processed cheese in the Community

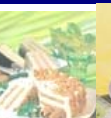

The European processed cheese industry achieved the second-best results of all time in terms of production volumes. According to initial estimates, the production volumes amounted to nearly 670,000 tonnes. Germany, France, Spain and Belgium are still

major producing countries. The development of per capita consumption varies, but can be considered to be constant in the European mean. These figures do not include the production volumes for so-called analogue products.

Processed cheese production (in tonnes)

3 EUROPEAN UNION

▪ The Lisbon Treaty

Europe has given itself a new constitution. Following many difficult discussions, the Lisbon Treaty was adopted by the EU parliament and the national parliaments. The EU parliament

will gain greater democratic rights as a result. Although this is to be welcomed in principle, in practice adjustments will still need to be made.

4 EUROPEAN LEGISLATION

▪ Health claims

Almost all of the major nations in the world are addressing the issue of "health claims", i.e. the health-related claims made in food labelling and advertising. The body of rules is not yet complete for Europe. Although the ordinance itself has been published, the corresponding legal texts on application

lists and modalities etc. are missing. The number of health claims submitted to EFSA in Italy is huge. Scientific evaluation is difficult and relates initially only to so-called children's products.. In the processed cheese sector the "health claims" issue only plays a minor role.

5 WORK OF THE INTERNATIONAL DAIRY FEDERATION

▪ Codex Standard for Processed Cheese (A-8)

"There's life in the old dog yet" would be an apt description of the discussions still being held over the Codex Standard for Processed Cheese. Although the Codex Commission abolished the old standard, it was unable to create a new standard. As a result, alongside the national definitions for processed cheese in the national cheese regulations there currently exist only the internationally valid definitions in the Harmonised System and the definitions for implementation in Europe in terms of the

Combined Nomenclature (CN). However, the discussions in the Codex have flared up again. It needs to be examined whether the member states in the Codex require regional Codex Standards for processed cheese. The majority of ASSIFONTE member states takes the view that no trade conflicts have currently resulted from the definitions of processed cheese. A joint definition of processed cheese therefore seems to be superfluous.

6 MAIN AREAS OF ACTIVITY OF ASSIFONTE

▪ Guidelines for good manufacturing practice

The guidelines for good manufacturing practice of processed cheese were adopted in 2009. They have been presented to the Commission for appraisal. A final opinion has not yet

been reached but we expect to see it shortly. Producers have hereby given fresh guarantees for quality in the manufacture of processed cheese in Europe.

▪ "Cheese for Processing" working group

The two sister organisations of ASSIFONTE – the European trade association Eucolait and the European Dairy Association (EDA) – have published guidelines in the working group "Cheese for Processing". This is intended to set out uniform standards for

the processing of cheese into processed cheese, particularly in relation to cheese portions. At all cases, it needs to be ensured that only raw materials of the highest quality are used for further processing.

▪ Comité Directeur

The board of directors of ASSIFONTE, the Comité Directeur (CD), held a series of meetings in the reporting period, during which the initial focus was on the market situation.

The discussions about "Cheese for Processing" and the Code of GMP within the EU Commission are being supervised and constantly verified for feasibility.

▪ General meeting

The general meeting of ASSIFONTE took place in September 2010 in The Hague. A short series of presentations outlined the important issues in dairy policy and foreign trade. The event was

exceptionally well attended. It should be emphasised that a high proportion of company management attends ASSIFONTE annual meetings.

- **Advisory group on milk**

The Secretary General of ASSIFONTE is a member of the advisory group on milk and dairy products in the EU Commission, where he is assisted by members of the ASSIFONTE Comité Directeur. This group advises EU officials on all issues concerning the dairy industry. Of course, market developments play a crucial role here. In particular, issues relating to food labelling were discussed with great intensity. An international discussion

arose around the definition of analogue products. This term is used to describe products which are similar to cheese or processed cheese, but in which a certain milk-based ingredient has been replaced (e.g. with vegetable fat). Some trade circles proposed using the term "Vegetable Cheese". ASSIFONTE was unable to agree with this proposal. Analogue products should be clearly labelled as such, and should be clearly set apart from the world of cheese.

- **European Dairy Association**
www.euromilk.org

The collaboration between ASSIFONTE and the EDA can be described as unproblematic. ASSIFONTE assumes responsibility for the tasks relating specifically to processed cheese, while issues which are of mutual interest can be settled by both organisations. That is

why ASSIFONTE is also a member of the "Trade and Economics" committee, as well as its WTO subgroup. The issue of "Cheese for Processing" continues to be dealt with jointly, as it is not just the processed cheese industry which is affected by it, but also natural cheese.

Closing remarks

Processed cheese is and remains an international product. Worldwide trade levels in processed cheese are high, and consumers accept the high quality of the products we produce. Happily it has been possible to increase production levels, and per capita consumption is stable.

It is not easy to earn money with processed cheese in the global value creation chain. The influence of the international food retail trade is large, and pressure on margins is increasing.

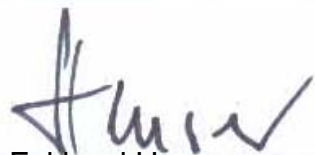

The production costs of processed cheese are dependent upon the costs of the raw ingredients. Fortunately for the farmers, milk prices in the European Union have become noticeably more stabilised in 2010/11. However, this also represents a challenge for the processed cheese industry. Increases in the costs of raw ingredients have to be passed on to consumers. This has not been universally successful, so there is still work to be done.

Work has continued on the harmonisation of food laws in Europe. This is pleasing, as a lot has been achieved. On the other hand, there are still many gaps in the food laws which need to be dealt with. Examples here include the regulation of genetically modified products, but also the labelling and advertising claims used for foods.

Work has been completed on the labelling laws within the food laws of the European Union. The consultations were difficult, and as always they ended in a compromise. ASSIFONTE believes that this compromise is bearable for all sides.

At this point, the office would like to thank everyone who gave their advice and support during the reporting period. This particularly applies to the members of the Comité Directeur, headed by Alain Cougolic.

This also applies to all other members who have constantly supported our activities with their contributions. The general meeting in Den Haag showed once again the strong interest in European cooperation in the processed cheese industry, and this is something we wish to continue working on.

Eckhard Heuser
Secretary General
